## Core Competencies

### Full Stack Development

### Python Backend Development

### Angular & TypeScript Development

### RESTful APIs & Microservices

### Database Design & Query Optimization

### Authentication, JWT & RBAC

### AWS Cloud & Cloud-Native Applications

### Docker, Kubernetes & CI/CD

### Application Performance & Production Support

## IT Skills

- **Frontend Development:** Angular 14+/16+, TypeScript, JavaScript (ES6+), RxJS, Angular Material, HTML5, CSS3, SCSS, Bootstrap, Reactive Forms, Standalone Components, Route Guards, HTTP Interceptors, Lazy Loading, NgRx
- **Backend Development:** Python, FastAPI, Django, Flask, RESTful APIs, Microservices, API Integration, JWT Authentication, Role-Based Access Control (RBAC)
- **Databases:** PostgreSQL, SQL Server, MySQL, Stored Procedures, Query Optimization, Indexing
- **Programming & Scripting:** Python, Bash, Go, Java
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Cloud & DevOps:** AWS (EC2, S3, IAM, VPC, RDS, CloudWatch), Docker, Kubernetes, Terraform, Infrastructure as Code (IaC), Jenkins, GitHub Actions, CI/CD, Nginx, Linux, Shell Scripting
- **Tools & Version Control:** Git, GitHub, Bitbucket, Postman, Jira, VS Code

## Profile Summary

- **Full Stack Developer with 4+ years of experience** designing, developing, deploying, and supporting enterprise applications using **Python, Angular, FastAPI, SQL Server, PostgreSQL, and AWS**. Experienced in building responsive web applications, RESTful APIs, authentication and authorization solutions, database-driven applications, reporting workflows, and enterprise business applications.
- Strong hands-on experience with **Angular, TypeScript, JavaScript, Python, FastAPI, Django, REST APIs, SQL, PostgreSQL, SQL Server, JWT, and RBAC**, with a focus on developing maintainable, scalable, and secure applications.
- Experienced in **Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Linux, Nginx, and AWS**, including containerization, CI/CD automation, cloud deployment, infrastructure provisioning, application monitoring, and production troubleshooting.
- Comfortable working across the complete software development lifecycle, including **requirements understanding, application development, API integration, database design, testing, deployment, debugging, performance optimization, and production support** in Agile/Scrum environments.

## Work Experience

**Since Apr'22 | Senior Software Developer – Full Stack & Cloud/DevOps**  
**Ozdocs IND PVT LTD, Noida**

### Key Result Areas:

- Design, develop, deploy, and support enterprise web applications using **Angular, Python, FastAPI, SQL Server, and PostgreSQL** across ERP, logistics, freight, CRM, and reporting domains.
- Develop **responsive and reusable Angular components** using TypeScript, Reactive Forms, Standalone Components, Route Guards, HTTP Interceptors, and Lazy Loading to build maintainable enterprise applications.
- Develop and integrate **RESTful APIs using Python and FastAPI** for business workflows, application services, backend processing, and third-party system integrations.
- Implement **JWT-based authentication and Role-Based Access Control (RBAC)** to secure application and API access according to user roles and permissions.
- Design modular backend services following **API-driven and microservices-oriented architecture principles**, separating business logic, API layers, and data access responsibilities.
- Integrate Angular applications with backend REST APIs and implement client-side handling of **authentication, authorization, API responses, validation, and error handling**.
- Design and optimize database queries, stored procedures, indexes, and API interactions across **SQL Server and PostgreSQL** to improve application performance.
- Develop automated **reporting, invoice, and document-generation workflows using Python**, supporting enterprise business and operational processes.
- Containerize frontend and backend applications using **Docker**, creating consistent application environments across development, testing, and production.
- Deploy and manage containerized applications using **Kubernetes**, including application configuration, service exposure, scaling, and rolling deployments.
- Provision and manage AWS infrastructure using **Terraform and Infrastructure as Code (IaC)** practices.
- Work with **AWS EC2, S3, IAM, VPC, RDS, and CloudWatch** for application hosting, storage, access management, networking, databases, monitoring, and operational support.
- Build and maintain CI/CD pipelines using **GitHub Actions** and **Jenkins** to automate application builds, validation, containerization, and deployment activities.
- Configure Nginx as a reverse proxy for routing requests between frontend and backend services and supporting application deployment environments.

## Education

- Post Graduate Diploma in Sales & Relationship Banking – Manipal Academy of Higher Education, Bengaluru, 06/2020 – 04/2021
- Bachelor of Engineering – Computer Science, RGPV, Bhopal, 2019

- Perform Linux-based deployment, configuration, log analysis, troubleshooting, and application support across development and production environments.
- Monitor application and infrastructure health using AWS CloudWatch and application logs, investigating availability, performance, and deployment-related issues.
- Troubleshoot issues across the Angular frontend, Python backend, APIs, databases, containers, Kubernetes workloads, and AWS infrastructure.
- Collaborate with development, QA, and business teams in an Agile/Scrum environment, participating in development, testing, release, deployment, and production-support activities

### Jul'21-Apr'22 | Deputy Manager – Personal Banker

HDFC BANK, Palam, New Delhi

#### Key Result Areas:

- Managed customer accounts, banking operations, relationship management, and day-to-day operational activities.
- Coordinated with operations and technical teams to resolve process-related issues and improve customer experience.
- Developed strong experience in stakeholder communication, process management, customer handling, and operational coordination.

## Project

### Cloud-Native Full Stack Application

**Tech Stack:** Angular, TypeScript, Python, FastAPI, REST APIs, PostgreSQL/SQL Server, AWS, Docker, Kubernetes, Terraform, GitHub Actions, Nginx, Linux

- Designed and developed a full-stack enterprise application using Angular for the frontend and Python/FastAPI for backend REST APIs.
- Developed reusable Angular components, reactive forms, API integrations, authentication flows, and application-level business functionality.
- Designed RESTful backend services using FastAPI, implementing business logic, data processing, authentication, and integration with database systems.
- Implemented JWT-based authentication and RBAC to control access to application functionality and backend APIs.
- Designed database interactions using SQL Server/PostgreSQL, including queries, stored procedures, indexing, and data-processing operations.
- Containerized frontend and backend services using Docker to provide consistent application environments.
- Deployed containerized services using Kubernetes, implementing service configuration, application scaling, service routing, and rolling deployments.
- Used Terraform to define and provision cloud infrastructure following Infrastructure as Code practices.
- Implemented GitHub Actions CI/CD pipelines to automate application build, validation, container image creation, and deployment workflows.
- Utilized AWS EC2, S3, IAM, VPC, RDS, and CloudWatch for application hosting, storage, security, networking, database management, and monitoring.
- Configured Nginx as a reverse proxy for frontend/backend routing and application access.
- Performed Linux-based deployment, application configuration, log analysis, troubleshooting, and production-support activities.
